Service Instructions
Band-Pass Filter Set

1612

Consisting of:

Removal of the Metal Case.

After removing the four threaded retainers at the back of the instrument, it is possible to slide the chassis and the front panel out of the case.

Trouble Shooting.

If the reason for a fault is not an obvious one such as faulty transistor, broken down resistor, etc., then first test the voltages of the transistors and compare them with the voltages shown in the printed circuit (Position of components 1612.7) in order to localize the defect. Should this method of finding the fault prove unsuccessful, then check the instrument by adopting the method described in the adjustment procedure. To correct a fault in a filter the filter drawer in question must be taken out. This can be done after the leads to the drawer have been unsoldered and the two screws which hold the drawer in place removed. The drawer will be rather tight at beginning, as the other end is held firmly by a pair of springs. When the trouble has been found and remedied, the voltages and adjustments which are influenced by the remedy must be rechecked.

The tolerances stated in the instructions can only be used as a guide for adjustment and control, but any deviations must not be corrected without being sure that the tolerances of the instruments used for making the adjustment are so small as to have no influence on the measurements.

The instructions in this Manual are given purely as a guide to the service of equipment. Some faults, as f.inst. small deviations in tolerances require for their correction special control equipment and extensive experience, and in these cases it is necessary to send the instrument to the factory.

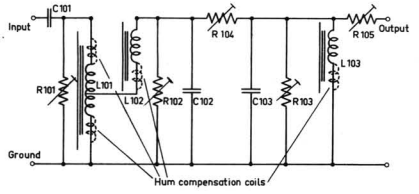
Spare Parts.

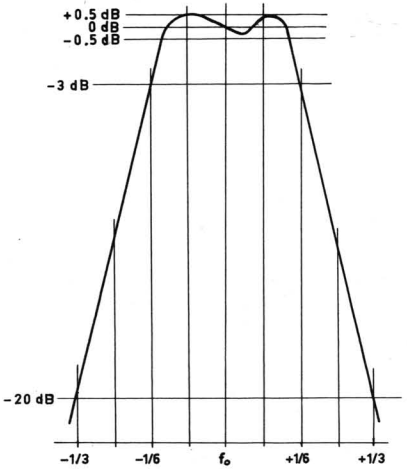
Please state type and serial number of apparatus when spare parts are ordered.

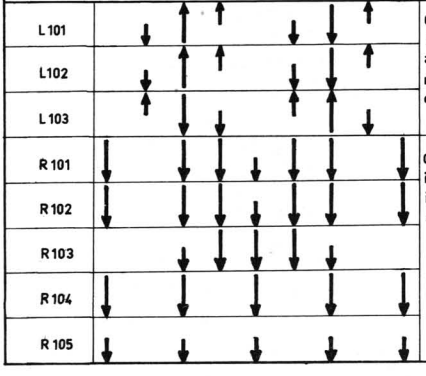
Instruments and accessories necessary for service and repair:

Multimeter (50 μA)
Frequency Analyzer type 2107
Beat Frequency Oscillator type 1022
(Beat Frequency Oscillator type 1013)
(Frequency Counter)
Pressure Gauge (30 - 50 gr)

1/3 Octave Filter







Change in filtercurve if the iron core or adjustmenttape are moved out of the coil

Change in filtercurve if the potentiometer is adjusted to a smaller resistance

Typical filtercurves for faulty filters

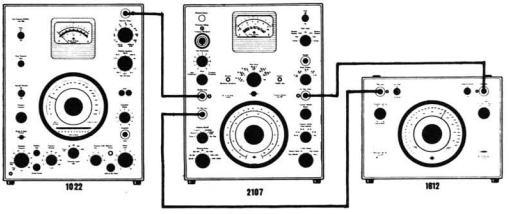
Correct filtercurve 0 dB

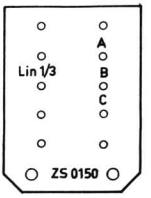
Faulty component	Adjustment procedure	Filtercurve for faulty filter
R 104.105	1612.3	+10 dB, 0 dB, -4 dB
R 101.102.103	1612.4	+4 dB, 0 dB
C101. L101	1612.4	0 dB, -5 dB
C103. L103	1612.4	0 dB, -15 dB
L101.102.103 trimmer 'C'	1612.4	+2 dB, 0 dB

Weighting Network

1612.2

valid from serial no. 64072





2.1. Linear

a. INPUT SWITCH:"Direct"
WEIGHTING NETWORK: "On"
FILTER SWITCH: "Lin."
FUNC.SELECTOR:"1/3 Octave"

Frequency: 1000 c/s. Adjust the input voltage for an 18 dB deflection on type 2107 (RANGE MULT.:"x1" and WEIGHTING NETWORK:"Lin.2-40ooo c/s")

Change WEIGHTING NETWORK on type 2107 to "Ext. Filter".
Change frequency to 50 c/s.
Deflection on type 2107: 17.8 - 18.2 dB.
If necessary adjust R 99 "Lin. 1/3"

Possible reasons for fault: defective transistor V1, V2
defective zener diode Q1.

d.c.voltage for transistor amplifier: Q1: approx. 12 V
V2 emitter: approx. 5 V
base: approx. 4.8 V.

Vary the frequency from 20-20ooo c/s.
Deflection on type 2107: 18 dB
Tolerance: $\pm$ o.3 dB (+ tolerance of type 1022: o.3 dB and type 2107: o.2 dB)

b. FUNC.SELECTOR to "1/1 Octave"

Vary the frequency from 20 - 20ooo c/s.
Deflection on type 2107: 18 dB (RANGE MULT.: "x o.3").
Tolerance: $\pm$ o.6 dB (+ tolerance of type 1022: o.3 dB and type 2107: o.2 dB)
If necessary change value of C 91 or R 88.

2.2. A-B-C Curves

a. INPUT SWITCH: "Direct"
WEIGHTING NETWORK: "On"
FILTER SWITCH: "Lin."
FUNC.SELECTOR:"1/3 Octave"

Frequency: 1000 c/s. Adjust the input voltage for an 18 dB deflection on type 2107 (RANGE MULT.:"x1" and WEIGHTING NETWORK: "Lin.2-40ooo c/s")

Change WEIGHTING NETWORK on type 2107 to "Ext. Filter".

b. FILTER SWITCH to curve A

Deflection on type 2107: 17.7 - 18.3 dB.
If necessary adjust R 98 "A".

c. FILTER SWITCH to curve B

Deflection on type 2107: 17.7 - 18.3 dB.
If necessary adjust R 97 "B".

d. FILTER SWITCH to curve C

Deflection on type 2107: 17.7 - 18.3 dB.
If necessary adjust R 94 "C".

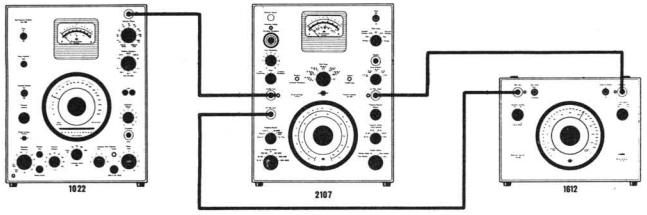
Whenever R 94, 97, 98 is adjusted item e should be checked as the settings of these potentiometers influence each other.

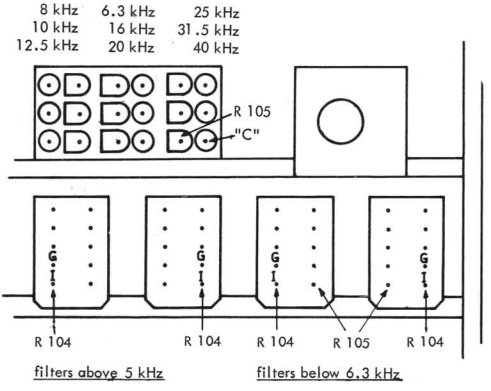
e.

Frequency c/s	Curve "A" Defl. on type 2107 dB	RANGE MULT.	Curve "B" Defl.on type 2107 dB	RANGE MULT.	Curve "C" Defl. on type 2107 dB	RANGE MULT.
20	4.6 - 12.6	X o.01	10.6 - 18.6	X o.1	8.7 - 16.7	X 1
63	10.4 - 13.9	X o.1	7.1 - 10.6	X 1	15.7 - 19.2	X 1
500	14.4 - 15.2	X 1	17.3 - 18.1	X 1	17.6 - 18.4	X 1
1000	17.7 - 18.3	X 1	17.7 - 18.3	X 1	17.7 - 18.3	X 1
2000	19.0 - 19.4	X 1	17.6 - 18.0	X 1	17.6 - 18.0	X 1
8000	15.7 - 17.4	X 1	13.8 - 15.5	X 1	13.8 - 15.5	X 1
20000	6.8 - 10.3	X 1	15.0 - 18.5	X o.3	14.9 - 18.4	X o.3

Level Adjustment

valid from serial no. 64072





3.1. 1/3 Octave Filter

a. INPUT SWITCH: "Direct"
FUNC.SELECTOR: "1/3 Octave"
WEIGHTING NETWORK: "On"

Set the frequency to the center frequency of the filter and adjust the input voltage for an 18 dB deflection on type 2107 (RANGE MULT .: "X1" and WEIGHTING NETWORK: "Lin. 2-40ooo c/s").

Change WEIGHTING NETWORK on type 2107 to "Ext.Filter".

b. FILTER SWITCH in required position
25-5ooo c/s

Vary the frequency around the center frequency of the filter and check the filter curve.
Deflection on type 2107: 18.0 - 18.5 dB for the tops
17.5 - 18.0 dB for the valleys

If necessary adjust R104 or R105.
Change frequency to + and - 1/6 octave.
Deflection on type 2107: approx. 15 dB.
After adjustment of R104-105, check 3.2

c. FILTER SWITCH in required position
6300 - 16ooo c/s

As under item b but adjust the valleys by means of R104 or R105 and the tops by means of trimmer "C".

d. FILTER SWITCH in required position
20ooo - 40ooo c/s

Check of these filters requires use of a high frequency oscillator f.inst. type 1013.

Check and tolerances as under item c.

3.2. 1/1 Octave Filter

a. INPUT SWITCH: "Direct"
FUNC. SELECTOR: "1/1 Octave"
WEIGHTING NETWORK: "On"

Set frequency to the center frequency of the filter and adjust the input voltage for an 18 dB deflection on type 2107 (RANGE MULT.:"X1" and WEIGHTING NETWORK :" Lin. 2-40ooo c/s)

Change WEIGHTING NETWORK on type 2107 to "Ext.Filter" and RANGE MULT. to "Xo.3".

b. FILTER SWITCH in required position 31.5 - 63 c/s

Vary the frequency around the center frequency of the filter.

Deflection on type 2107: 18 - 20 dB for the tops
16 - 18 dB for the valleys

Change frequency to + and - 1/2 octave.
Deflection on type 2107: approx. 15 dB

If necessary to adjust the filter. Set the frequency at the point where the deflection exceeds the tolerance and note the deviation from 18 dB deflection on type 2107.

Change FUNC.SELECTOR to "1/3 Octave" and turn the FILTER SWITCH to the defect 1/3 octave filter, indicated by the greatest deflection on type 2107 (RANGE MULT.: "X1")

Change frequency to the center frequency of the defect filter and adjust the deflection on type 2107 by means of R104 to the deviation just noted from 18 dB deflection, but in opposite direction.

Then adjust R105 for a deflection on type 2107: 17.5-18.0 dB and repeat item b.

c. FILTER SWITCH in required position 125-8ooo c/s

Adjustment as under item b,
but deflection on type 2107: 18 - 19 dB for the tops
17 - 18 dB for the valleys.

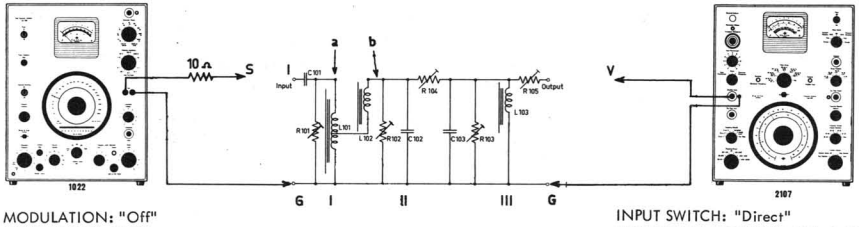
d. FILTER SWITCH in required position 16ooo - 31ooo c/s

Adjustment of these filters requires use of a high frequency oscillator f.inst. type 1013.

Adjustment and tolerances as under item c.

Complete Adjustment

valid from serial no. 64072



MODULATION: "Off"
COMPRESSOR: "Off"
MATCHING IMP.: "6Ω"

INPUT SWITCH: "Direct"
WEIGHTING NETWORK: "Lin 2-40ooo"
METER SWITCH: "RMS. fast"
FUNC. SELECTOR: "Selec. Section Off"

Before adjustment turn potentiometer R101-2-3 to mid. position R104 to max. resistance and R105 to min. resistance.

4.1. Adjustment of Resonant Circuit I and II

a. Reference adj.

Connect: S and V to point I
b to point G

Set the frequency to the center frequency of the filter and adjust the input voltage for an 18 dB deflection on type 2107 (RANGE MULT.:"x1" and METER RANGE: "1 V").

b. Adj.of resonant frequency L 101.

Change V to point a.

Change frequency to approx. 1% above the center frequency of the filter and adjust L 101 to max. deflection on type 2107.

c. Adj. of Q. R 101.

Adjust R101, if any (some of the low frequency filters have no R101), for a 19 dB deflection on type 2107 (RANGE MULT.:"x1" and METER RANGE "10 V")

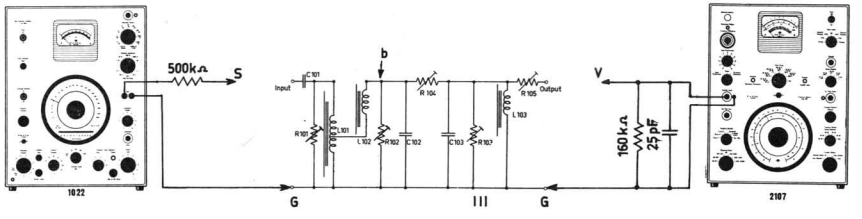
d. Adj. of resonant frequency L 102.

Connect: S to point a.
V to point b.
Filter output to point G.

Adjust L102 to max. deflection on type 2107 at the same frequency as under item b.

e. Adj. of Q. R102

Adjust R102, if any (some of the low frequency filters have no R102), for a 10 dB deflection on type 2107 (RANGE MULT.:"xo.3" and METER RANGE: "10 V".)



4.2. Adjustment of Resonant Circuit III

a. Reference Adj.

Connect: S to V.

Set the frequency to the center frequency of the filter and adjust the input voltage for an 18 dB deflection on type 2107 (RANGE MULT.:"x1" and METER RANGE: "1V").

Octave-Frequency Table

- octave			center frequency	+ octave		
1/2	1/3	1/6	c/s	1/6	1/3	1/2

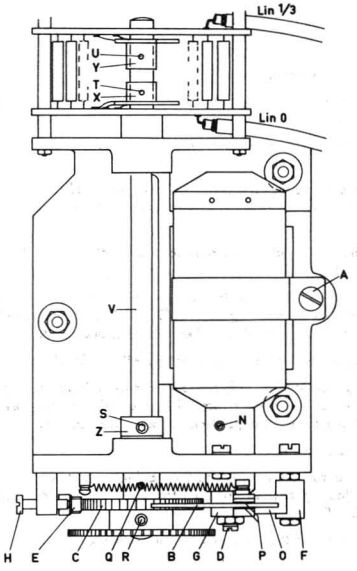
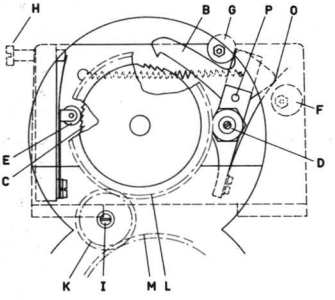
Automatic Switching Device 1612.6

valid from serial no. 64072





6.1. Mechanical Adjustment

a. Max.operating power

Operate the FILTER SWITCH automatically, by means of pulses from a Level Recorder Type 2305 or an external DC supply (24 V, 180 mA) in series with a switch, connected to REMOTE CONTROL jack. (+ should be connected to pin 2 and - to pin 1).

Loosen screw A and rotate the motor until max. operating power is obtained.

Before retightening screw A check that the pawl B is located in the middle of the pawl wheel C.

b. Pawl mechanism

Turn the motor axle D clockwise to its limit. Check that the spring loaded locking roll E is in a position between 2 teeth on the pawl wheel C. If not loosen the nut and turn the eccentric nylon bush F to the correct position. After adjustment carefully retighten the nut.

Turn the motor axle D slowly clockwise and check the movement of the pawl B. The pawl should first move down to the pawl wheel C on a point between 2 teeth and then turn the pawl wheel one position. If not, loosen the nut and turn the eccentric nylon bush G to the correct position.
After adjustment carefully retighten the nut.

Replace the frequency pointer and the bakelite knob.

Adjust the spring load on locking roll E by means of screw H. The movement of the FILTER SWITCH should be smooth but the screw should be tightened so that the pressure can overcome the friction in the switch and move the pawl wheel back again if it is left a little out of locking position.

Operate the FILTER SWITCH automatically as under item a and check that the switching is stable, if not readjust screw H.

c. Play in the frequency pointer.

Loosen screw I and tighten it again in a position where the play between the nylon wheel K and both the metal wheels L and M is small, but without any point where the wheels are moved with force.

d. Lubricating

Apply a little thin non-acidic machine oil (e.g. sewing machine oil) only to the following parts: Motor, point N

Switching axle, point Q

Pawl mechanism, point O, P

6.2. 50 Position Switch

Remove the protecting tape from the left side of the switch.

a. Cleaning

Loosen screws R-S-T-U and pull out axle V far enough so that the rotary contacts X-Y are free.

Carefully clean the fixed and rotary contacts with a soft cloth and trichlorethylene.

b. Contact Pressure

After cleaning replace the rotary contacts X-Y and axle V, tighten the pawl wheel C and stop-bush Z in a position which allows only a slight play in the axial direction.

Adjust the rotary contacts X-Y along the axle for a contact pressure of 30-40 gr. and tighten screws T-U.

c. Check of Switch

Connect an ohmmeter across the core in the coax cable "Lin.1/3" and the green lead connected to soldering tag "Lin. 1/3" on filter drawer ZS 0150 and turn the FILTER SWITCH to a position where the resistance is 0.

Replace the frequency scale and fix the pointer in position "Lin."

Check that the rotary contact Y is placed on the axle V in relation to the pawl wheel so that it gives contact symmetrically around the locking position. If not loosen screw U and correct the position of the rotary contact.

After adjustment recheck contact pressure.

Connect the ohmmeter across the core in the coax cable "Lin.0" and the red lead connected to soldering tag "Lin.0" on filter drawer ZS 0150. Set the FILTER SWITCH to "Lin."

Check the rotary contact X in the same way as rotary contact Y.
